Get Up With Gallagher

Seminar Series for Privacy Law and Cyber Security

Please join Riley Croke, Mark Farrow and Dan Lewis of Arthur J. Gallagher as they host industry experts from Harrison Pensa and Digital Boundary Group for an informative seminar addressing Privacy Law in Ontario and how to improve your network security awareness.

Evolving Privacy and Cyber Security Legal Risks

David Canton - Information Technology and Intellectual Property Law Lawyer at Harrison Pensa

The landscape of Privacy Law in Ontario is about to change. David will talk about where we are now, and proposed legislation that will drive compliance. Upcoming privacy breach notification requirements, new and evolving privacy breach torts, and how the Privacy Commissioner's decision on high profile breaches are changing the legal standard and risks for privacy breaches. We will explore technology advances such as the Internet of Things, Big Data, and Artificial Intelligence and how they pose new challenges.

Emerging Information Technology (IT) Security Threats

John Millar- President, IT security assurance firm Digital Boundary Group (DBG)

Malicious intrusions, human mishaps or rogue activities pose real threats to security and privacy that can no longer be overlooked. Understanding where your organization is vulnerable, the sources of these threats and motivation behind them is a necessity in today's digital world. John will discuss current examples of cyber security exploits throughout the community such as: ransomware, malware, social media, access card spoofing and defeating two factor authentication. Recommendations will be provided for steps to improve security awareness and posture through senior management, Boards of Directors, your employees and IT staff.

Cyber Risk Transfer Solutions

Dan Lewis - Director of Cyber Liability, Arthur J. Gallagher Canada

Now that you understand a bit more about the legal landscape in Canada and emerging IT security threats, how can you quantify the exposure for your own organization? Are you comfortable managing this risk using your own balance sheet? Is it better to invest in additional IT security, transfer the exposure to insurers, or some combination of both? We will explore ways to quantify your own risk, and touch on how the insurance market has evolved to provide solutions to this ever-evolving threat.
